

Production Performance Review For Oil Rig – Data Request & Analysis

Hey Analyst,

I trust you are well. Our operation is up and running. It has been four weeks since we kicked off, and management wants to understand what has been happening. We need you to investigate the production data and come up with insights and findings that can help us improve performance across all rig locations.

Performance Targets

Production (UPH Target)

Each location is expected to produce **at least 11 Units Per Hour (UPH)**.

Quality Target (UPI Target)

We understand that mistakes are inevitable. However, each location is expected to produce **at least 250 units** before encountering a single issue(.

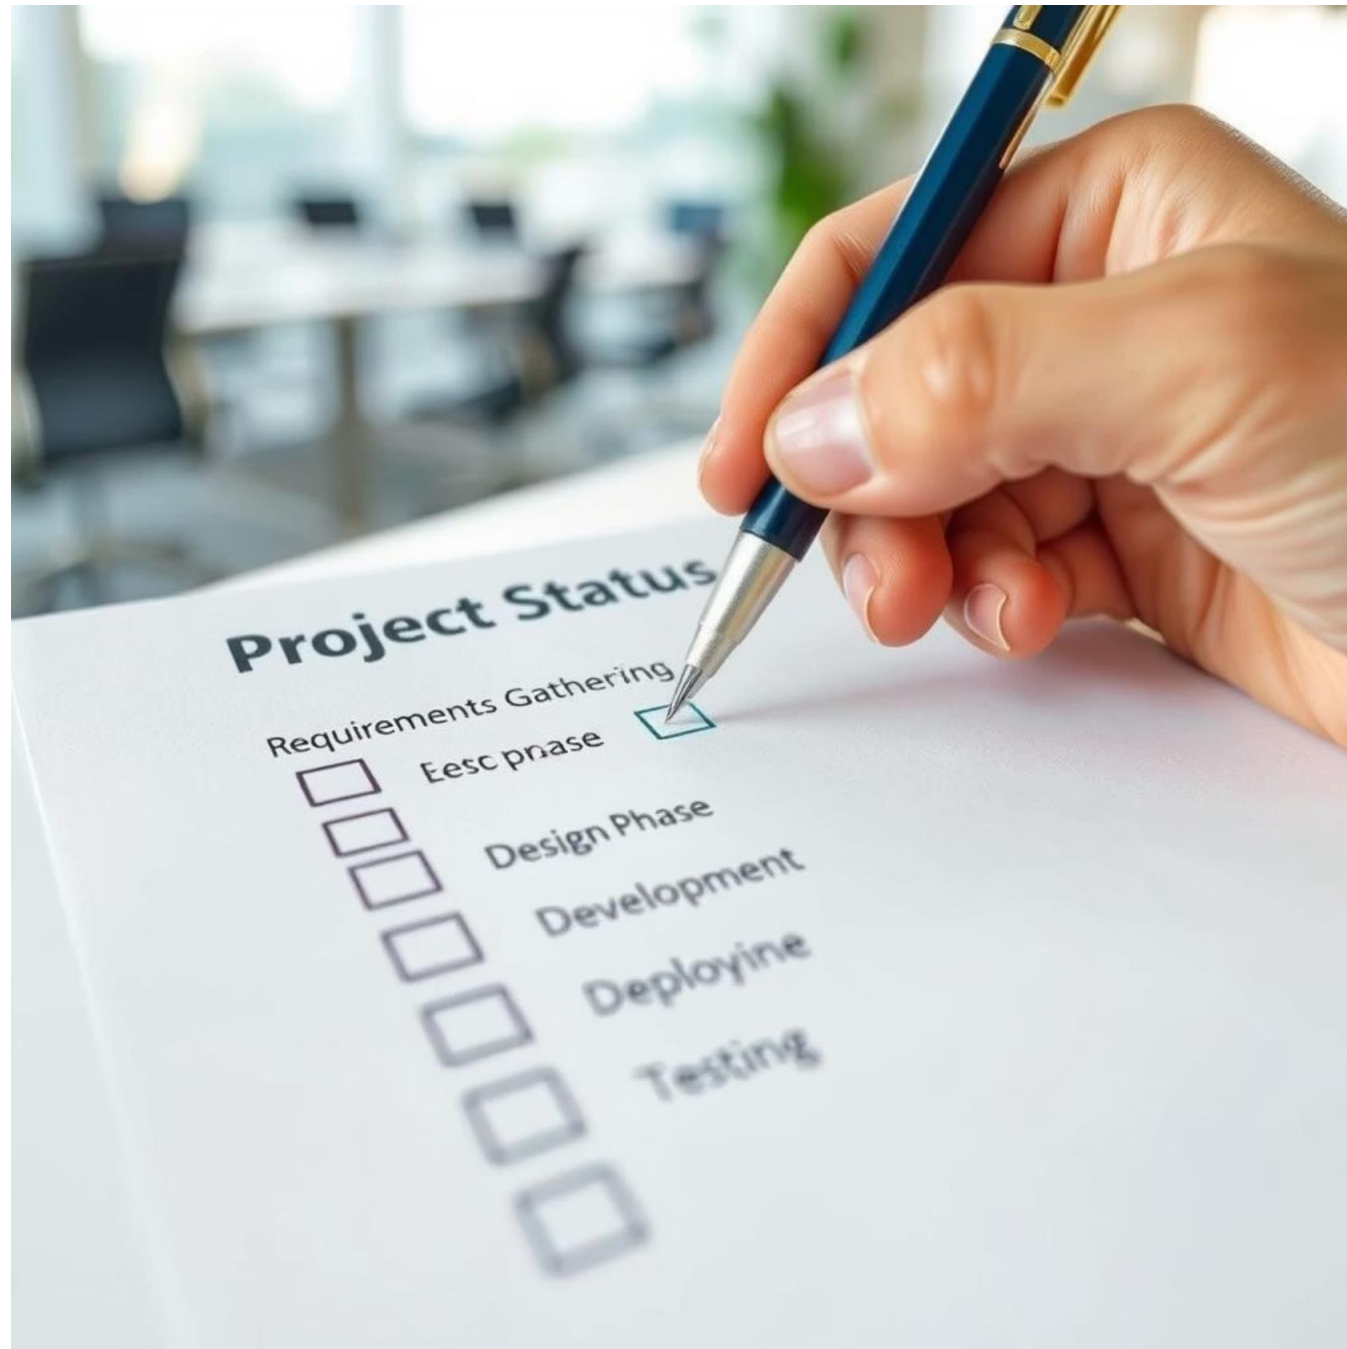

Cost (CPU Target)

They should also not spend more than **₱750** to produce one unit.

Training Target

We believe in staff growth, so **every staff member is expected to complete at least one hour of training per week**.

Assessment Focus

Your role is to use these targets to assess each location and determine which ones are performing well and which ones are falling below expectations. Specifically, management wants answers to the following:

1. What is the total number of units produced so far?
2. What does the cost of production look like?
3. How many employees do we have across all rig locations?
4. What is the average work hours across all locations?
5. What is the average unit production rate per hour across all locations?
6. What is the cost of producing one unit?
7. Are there any locations producing fewer units than expected before they have a quality issue?
8. Which locations are not meeting the training target of at least one hour per week?
9. Is there a relationship between staff training hours and key performance metrics like UPH, UPI, and CPU across all rig locations?

Additional Insights & Deliverable

Other Insights

Kindly check for any **other insights** that might help management make better decisions moving forward.

Interactive Dashboard

We are expecting a **fully interactive dashboard** that clearly highlights these key findings and helps us optimize our production flow.

Key Metics

Closing Remarks

Looking forward to hearing from you.

All the best,

Etuk Anietie

Chief Product Analyst
